The absolute linear transducer TM1 enables a compact and cost-effective position measurement. It consists of a stainless steel flange welded to a pressure-resistant rod and can therefore be used under harsh environmental conditions.

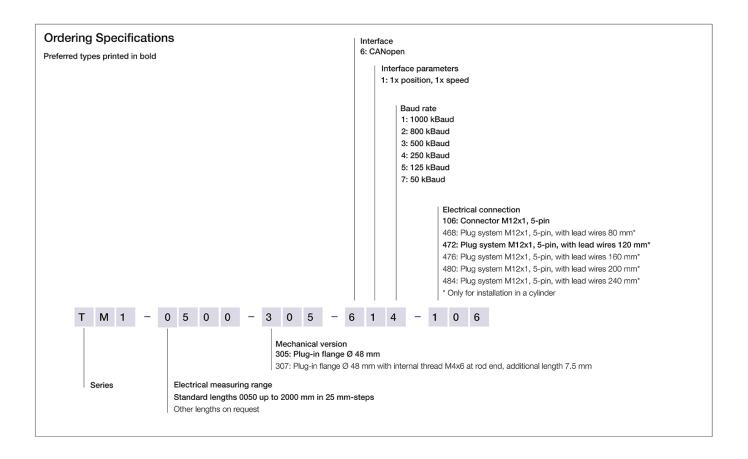

The magnetostrictive measuring technology offers excellent accuracy for measuring lengths up to 2000 mm.

The passive ring-shaped position marker allows a mechanically decoupled measurement.

When using floating position markers, we recommend to secure the marker against loss with a washer at the rod end. For this purpose, a sensor version with inner

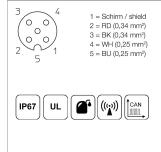

thread at the rod end is required (s. ordering code).
