Short Stroke Transducer 5 up to 50 mm Touchless

TFD-4000 Ratiometric

CE

Special Features

- Touchless hall technology
- 2 part design, mechanically decoupled
- High protection class, IP67, IP68, IP69
- Resolution up to 12 bit
- Wear-free
- Temperature range -40 °C up to +125 °C
- One and multi-channel versions
- Optimized for mechanical engineering and mobile applications
- Competitive price / performance ratio
- Extremely flat design
- Customized versions available on request

Applications

- Manufacturing Engineering (textile machinery, packaging machinery, sheet metal and wire machinery)
- Medical Engineering
- Mobile working machines (industrial trucks, construction machinery, agricultural and forestry machinery)
- Marine applications

The sensor utilizes a contactless magnetic technology to determine the measured position. A separate magnet or magnetic position marker is attached to the moving element to be measured. The orientation of the magnetic field is measured and an analog voltage representing the stroke is the output signal. The touchless position sensor TFD-4000 is ideally suited for positioning in measuring ranges from 0... 5 to 0... 50 mm.

The very compact physical dimensions allow installation in small spaces. The housing is made of high grade temperature-resistant plastic material. The sensor is sealed and is not sensitive to dust, dirt or moisture.

The 2 part design, with the TFD sensor itself and its magnetic position marker, offers great flexibility when mounting.

The accuracy of linear magnetic sensors is strongly influenced by the installation space. Our many years of experience in development, production and application of magnetic sensors as well as our state-of-the-art simulation tools allow us to provide you with optimal designs to suit your applications.

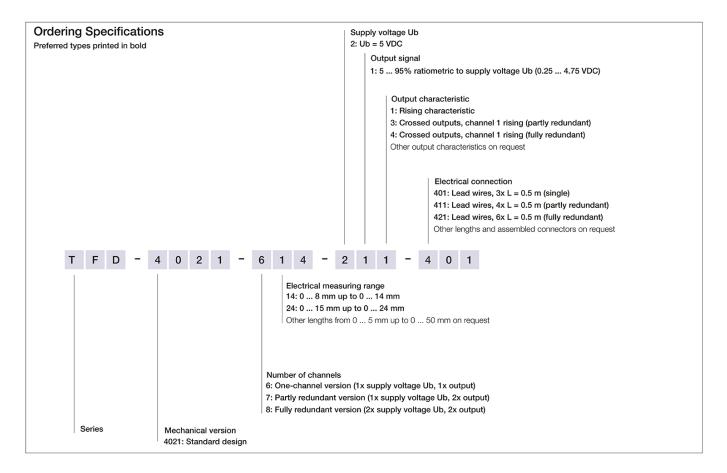

Description	
Material	Housing: high grade, temperature resistant plastic PBT GF with brass inserts
Mounting	With 2 pan head screws M4x14 (included in delivery)
Fastening torque of mounting	250 ± 50 Ncm
Electrical connection	Lead wires 0.5 mm ² (AWG 20), PVC
Mechanical Data	
Dimensions	See dimension drawing

approx. 10 g

Weight (w/o connection)

Accessories included in delivery

• 2x Pan head screws M4x14

Drawing

If the magnet is located centrally to the sensor, the sensor is near the electrical center position. Direction of output characteristic with north pole alignment (color marking) or marking according to sketch:

Signal channel 1 falling, signal channel 2 rising when moving in direction of the electrical connection.

Installation Instruction

The accuracy of linear magnetic sensors is strongly influenced by the installation space. Using the latest simulation tools, we are able to design the measurement system optimally for yourapplication. In order to select the best suitable magnet for your requirements please contact us. Between magnet / sensor unit and surrounding magnetic or magnetizable materials a minimum distance of 12 mm must be ensured. If this is not possible, the accuracy of the system will be affected and the data have to be verified.
